Powerful Web-based User Management
Create, edit and remove accounts, email aliases, reserve login names, and more!

Seamless Integration

Everyone.net Outsourced Mail integrates seamlessly with your current provisioning and billing system. Our eXtensible Remote Control (XRC) API works with ASP, Java, Perl, PHP, and most other popular languages. Plug-in support for turnkey solutions such as Rodopi Software is also available.

Instant Migration

Moving messages and users to Everyone.net Outsourced Mail is a simple and secure process. Everyone.net email experts coordinate with you to ensure that your data is transferred with the utmost speed and integrity.

Complete Control

Everyone.net Outsourced Mail keeps you in the driver's seat by integrating with your existing management system. You can also use our flexible web-based application to administrate and customize your fully branded email service:

- Easily manage one to one hundred thousand or more domains.
- Create multiple email account configurations per user or per domain with up to 2 GB of storage, 30 MB file attachments, Anti-Virus, SpamShield and more.
- Globally set default email account configurations.
- Offer private label web-based administration and customization to your customers.
- Detailed user reports can be imported into your favorite database or spreadsheet.
- Customize Web Mail interface elements, layout, text, colors, fonts, images, page properties, welcome letters, storage quota limit warning letters, and more.

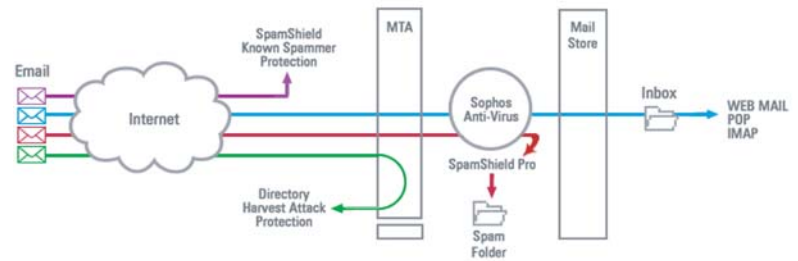

World-Class Features

In addition to IMAP, POP, and authenticated SMTP, Everyone.net Outsourced Mail sports a feature-rich Web Mail client:

- Secure Login via 128-bit SSL
- Rich Text Editor with Ajax support and built-in Spell Checker
- Fully integrated SpamShield controls (unlike "perimeter" services)
- Robust Address Book imports and groups contacts
- Powerful server-side Email Rules
- Email Forwarding and Auto Response messages
- New Email Notification alerts
- Check External Mail accounts
- Personal signature
- Advanced Search engine
- Nested Folders organization
- American English, Latin American Spanish, and Unicode support
- Plus a host of additional features to choose from!

Total Protection

Everyone.net Total Protection 2.0 protects you and your customers from the spam and virus onslaught—the leading cause of churn among ISPs, and other service providers.

Total Protection 2.0 includes:

- Always up-to-date Sophos Anti-Virus scans incoming email.
- Everyone.net intelligently blocks spam attacks at the source.
- BounceShield eliminates forged returned messages.
- SpamShield automatically moves unwanted email to the Spam folder for review, or to the Trash.
- Hide images with Web Mail to block offensive graphics and bugs.
- SpamShield Score X-header enables filtering for POP clients.
- Approved Senders list lets trusted email addresses or domains through.
- Blocked Senders list rejects messages from spammers.
- Only accept email from Approved Senders (greenlist).
- Email Rules provide advanced control at the service and user level.
